

Giacomo Vecchi

Frontend Developer

👤 About

I have always been fascinated by the IT world.

I started my career working for a large company in the automation industry doing foreign transfers while experimenting with projects with Arduino, Raspberry and the Web.

I then found a startup that dedicated time and training making me a Frontend developer with React technology stack, Tailwind, GraphQL etc.

💼 Working Experience

Frontend Developer at Netstrada

December 2020 — Present

I am currently working on a **large B2B trading project**, where I have been involved for approximately 9 months.

The team comprises 8 developers, including both FE and BE, along with a Project Owner. Our daily coordination is facilitated by the Scrum Master during our morning stand-up meetings.

The frontend technologies used:

- React.js
- Tailwind CSS
- Axios
- Zustand
- GitHub
- Figma

My support has been developing new features and pages in the application.

- I am refactoring many React components with better code quality, readability and maintainability.
- I am advising and choosing together with the Scrum Master which technology to implement as well as architectural choices such as implementing the Docker container for the frontend.
- Close contact with Figma designers for implementation of new features.

Frontend Developer at Netstrada

December 2020 — Present

Contributed to the development of an application for event management in various Italian cities

The frontend technologies used were:

- Next.js
- Tailwind PRO
- GraphQL
